

HTW-4

The very latest from Hiretech

The HTW-4 Steam Wallpaper Stripper has been developed from the highly successful HTW-3. Its a full 2.6 kilogrammes lighter and even more reliable with many new design features that make it more efficient for a longer life.

- The water tank is made by a revolutionary process with no welded seams which allows tin plating to a very high standard of both inside and outside surfaces of the tank including all edges. Providing a complete anti-rust treatment for longer life and durability.
- Specially designed heater element featuring an integral safety cut-out prevents water tank running dry and burning out element.

- Water tank can be filled with water immediately after use without damage to element.
- Two pressure safety points for total safety and reliability.
- A full 2.6kg lighter makes the HTW-4 more portable with 4 strengthened castors providing easy movement over floor surfaces.
- Safe with all electrical connections totally enclosed supplied ready for use with electric plug fitted.
- No loose parts that the user might loose, with hose and cable in their own special compartment the HTW-4 is entirely self-contained. The steam plate clips on to become a comfortable carrying handle.

- Cleaning is simple when needed. With a stainless steel steam plate.
- Detailed user instructions are included on each HTW-4.

Easy To Operate

Just fill the water tank with up to 7 litres of tap water and after a short 'steam up' (under ten minutes for hot water, double for cold) the steam plate is applied to the wall and the steam loosens the wallpaper adhesive making it a simple job to remove. Just the right amount of steam is produced and with the clever design of the steam plate condensation is kept to a minimum. Making the HTW-4 a pleasure to work with.

HTW-4 STANDARD SPECIFICATION

Working Capacity	7lt
Heater Element	2500W
Weight Dry	7kg
Steam Plate	800g

SUPPLY	240-250V
Power Consumption	10.5 amp
Full tank steam up from cold water (approx)	21 mins
Working time before refill	80-100 mins
Water remaining	1.11lt
Evaporation per hour	4.21lt

SUPPLY	220-230V
Power Consumption	9.5 amp
Full tank steam up from cold water (approx)	23 mins
Working time before refill	90-115 mins
Water remaining	1.21lt
Evaporation per hour	3.61lt
